

A TRUE BREAKTHROUGH IN DRY EYE CARE

GETTING TO THE ROOT CAUSE OF DRY EYE

A PARADIGM SHIFT IN THE TREATMENT OF DRY EYE DISEASE

OptiVize represents a paradigm shift in dry eye management – **treating the underlying causes of Meibomian Gland Dysfunction** rather than just masking symptoms.

By combining biofilm vaporization and thermal gland expression, this innovative treatment delivers lasting improvements in comfort, vision quality, & eye health.

Benefits of OptiVize:

- **Comprehensive Biofilm Removal**
Vaporization clears bacteria & debris deep within the glands
- **Effective Gland Clearance**
Gentle heat & vibration remove thickened oils & toxins
- **Comfort & Convenience**
Quick, noninvasive and zero downtime
- **Customizable Care**
Can be combined with other advanced treatments
- **A NEW Revenue Stream**
For your practice

1

Lid Debridement with BlephEx

Biofilm on the lid margin acts like a layer of Saran Wrap over the meibomian gland orifice, sealing them off. BlephEx thoroughly removes that.

BlephEx
Healthy Lids for Life!

2

Vaporization

Using the OptiVize VCL, we apply a low-voltage electrical waveform that specifically targets the intraglandular bacterial biofilm, completely vaporizing it.

3

Vibrating Expression

The OptiVize vibrating and forceps melt and remove not only the diseased meibum, but the tenacious bacterial biofilm. The vibrating energy not only provides for a more thorough expression, but also helps to desensitize nerves for improved patient comfort.
